seminar /fair / excursion small wind energy

small wind energy for developing and transition countries

A sustainable future based on improved technologies and implementation concepts

March 13 - 19, 2011

Glücksburg /Germany - Thysted/Denmark - Husum

We are happy to invite you to join a special seminar on small wind energy turbines with special focus on developing and transition countries: This is a unique chance to

- get basic knowledge on meteorological preconditions
- identify technical requirements and options
- exchange with pioneers and practitioners in Germany and Denmark
- talk with different manufacturers at Husum New Energy
- participate at the 2nd world summit of small wind generators

The seminar takes place at the artefact centre for sustainable development in Glücksburg in the North of Germany. Several excursions carry you to the Danish Folkecenter and New Energy fair in Husum.

Winds of change are needed for large grids but also for small decentralized units. Small wind turbines have a high potential for stand-alone sites and in combination with solar and other generators. But know how for testing, planning and decision making is required as not every product fulfills its promises. The seminar prepares for the visit of the world's most important fair with 50 small wind exhibitors at the **New Energy** at the 2nd part of the workshop.

Application and registration is possible from now until February 10.

Applicants shall document their existing activities in the field of energy planning either in governmental, non-governmental or private sector. Places are limited.

All details on costs and participation can be found on the attached flyer or under www.artefact.de

The seminar is supported by World Wind Energy Association and Bingo foundation. Further reduction or subsidy is not available.

Thank you for informing your organisation/other pioneers for renewable energy on this seminar.

Seeing you in Glücksburg ?

Werner Kiwitt
